Staphylococcus aureus is a Gram-positive, coagulase-positive, catalase-positive, non-motile coccus found in the genus Staphylococcus and family Staphylococcaceae. They are facultative anaerobic organisms, and they cause haemolysis on blood agar. Staphylococcus species are usually arranged in groups, in pairs, as well as in tetrads. They can also occur singly or as single cells.

Carbohydrates are molecules that contain carbon, hydrogen, and oxygen.; There are twice as many hydrogen atoms as carbon or oxygen atoms. The general formula for a carbohydrate can be written as $C_x(H_2O)_y$.; They act as the source of energy (e.g. glucose), as a store of energy (e.g. starch and glycogen) and as structural units (e.g. cellulose in plants and chitins in insects).

Epidemiology is the study and analysis of the distribution (who, when, and where), patterns and determinants of health and disease conditions in defined populations.. It is a cornerstone of public health, and shapes policy decisions and evidence-based practice by identifying risk factors for disease and targets for preventive healthcare. Epidemiologists help with study design, collection, and ...

Epidemiology - Wikipedia

When should asymptomatic persons be tested as a component of contact tracing? Contact tracing is a valuable tool in the interruption of chains of infection transmission during outbreaks and has been used successfully to curb disease spread in past epidemics (13, 14). The key aim of contact tracing is to capture potential transmission events before they occur.

The hippocampus shrinks in late adulthood, leading to impaired memory and increased risk for dementia. Hippocampal and medial temporal lobe volumes are larger in higher-fit adults, and physical activity training increases hippocampal perfusion, but the extent to which aerobic exercise training can modify hippocampal volume in late adulthood remains unknown.
